

### Assignment 3

1. What is file handling in C language, explain with example.

C provides several build-in function to perform basic file operations:

fopen() - create a new file or open a existing file

fclose() - close a file

getc() - reads a character from a file

putc() - writes a character to a file

fscanf() - reads a set of data from a file

fprintf() - writes a set of data to a file

getw() - reads a integer from a file

putw() - writes a integer to a file

fseek() - set the position to desire point

ftell() - gives current position in the file

rewind() - set the position to the beginning point

Write a program to enter 10 students' data (Name Student ID Course City) using file handling with the help of above operations.

2. What is Preprocessor, Macro Substitution directives, File inclusion Directives, Command Line Arguments, explain with example.
3. What is Dynamic Memory Allocation, static and dynamic memory allocation, malloc () and free () Functions, explain with example.
4. How you are going to perform in C language with example declaring and Initializing Strings, String Input/Output gets(), puts(), fgets(), fputs() , and String Handling Functions.
5. Write a program for these series:
